

Executive Summary

Business Performance Dashboard - Power BI

Author: Victoria Zhang | Tools: Power BI Desktop, Power Query, DAX, Data Modeling | Dataset: Sample Superstore

Project Overview

This project presents an interactive Power BI dashboard for monitoring retail business performance across sales, profit, product categories, customer segments, regions, and monthly trends. The dashboard turns order-level data into management-ready KPIs and visual insights for performance review and decision-making.

Key Performance Indicators

Total Sales	Total Profit	Profit Margin	Total Orders	Avg. Order Value
\$2.33M	\$292.30K	12.56%	5,111	\$455.20

Dashboard Scope

The dashboard includes KPI cards, monthly sales trend analysis, sales by category, profit by region, sales by customer segment, and interactive slicers for year, category, and region.

DAX Measures Created

Total Sales, Total Profit, Profit Margin, Total Orders, Total Customers, Average Order Value, Total Quantity, and Average Discount.

Skills Demonstrated

Power BI dashboard design, DAX measure creation, data table modeling, KPI reporting, interactive slicer design, time-series analysis, and business insight communication.

Key Findings

- Technology was the highest-performing product category by sales.
- Consumer customers contributed the largest share of total sales.
- West and East generated the strongest regional profit performance.
- Monthly sales varied over time, highlighting the need for regular trend monitoring.

Business Recommendations

- Prioritize high-performing categories while monitoring margin quality.
- Investigate lower-profit regions to identify pricing, discount, or operating issues.
- Use monthly trends to support forecasting, campaign timing, and inventory planning.
- Apply customer segment insights to improve targeting and retention strategies.

Business Value

The dashboard provides a single executive view of sales performance, profitability, customer mix, and regional contribution. It supports faster reporting, clearer performance diagnosis, and more informed business planning.
